

Statistics Review

Ricson

July 12, 2017

Contents

1	Probability Theory	3
1.1	Conjugate Priors	3
1.2	Basic manipulations of Multivariate Gaussians	3
1.3	Extremal Value Distributions	3
2	Information Theory	3
2.1	Basics	3
2.2	KL Divergence	3
2.3	Fisher Information Matrix	3
3	Linear Algebra	3
3.1	Singular Value Decomposition	3
3.2	Principle Component Analysis	3
4	Probabalistic Graphical Models	3
4.1	Viterbi and Forward Backward Algorithm	3
4.2	Message Passing and Loopy Belief Propagation	3
4.3	Efficient Inference in Dense Gaussian CRFS	3
5	Linear and Nonlinear Bayesian Models	3
5.1	Bayesian Linear Regression	3
5.1.1	Evidence Approximation	3
5.2	Bayesian Logistic Regression	3
5.2.1	Laplace Approximation	3
5.3	Spline and Wavelet Bases	3
5.4	Bayesian Neural Networks	3

6	Approximate Inference	3
6.1	Expectation Maximization	3
6.2	Variational Inference	3
7	Sampling Algorithms	3
7.1	Importance Sampling	3
7.2	Monte Carlo Markov Chain	3
7.2.1	Reversible Jump MCMC	3
7.3	Gibbs Sampling	3
8	Optimization	3
8.1	Lagrange Multipliers	3
8.2	Lagrangian Duality	3
8.3	KKT Conditions	3
8.4	SGD Variants	3
8.5	BADMM Algorithm	3
9	Reinforcement Learning	3
9.1	Optimal Control	3
9.1.1	LQR	3
9.1.2	MPC and ILQR	3
9.1.3	Stochastic Optimal Control	3
9.2	Policy Gradients	3
9.3	Natural Policy Gradients	3
9.4	Trust Region Policy Optimization	3
9.5	Guided Policy Search	3
9.6	End to End Deep Visuomotor Policies	3
10	Neural Networks	3
10.1	Variational Autoencoders	3
10.2	Architectures	3
10.2.1	Neural Turing Machine	3
10.2.2	Neural GPU	3
10.2.3	Grid LSTM	3
11	Miscellaneous	3
11.1	Matrix Differentials	3
11.2	Calculus of Variations	3

11.3 Echo State Networks	3
11.4 Gumbel Trick	3
11.5 Support Vector Machines	3
11.6 Gaussian Processes	3
11.7 Independent Component Analysis	3

1 Probability Theory

1.1 Conjugate Priors

1.2 Basic manipulations of Multivariate Gaussians

1.3 Extremal Value Distributions

2 Information Theory

2.1 Basics

2.2 KL Divergence

2.3 Fisher Information Matrix

3 Linear Algebra

3.1 Singular Value Decomposition

3.2 Principle Component Analysis

4 Probabalistic Graphical Models

4.1 Viterbi and Forward Backward Algorithm

4.2 Message Passing and Loopy Belief Propagation

4.3 Efficient Inference in Dense Gaussian CRFS

5 Linear and Nonlinear Bayesian Models

5.1 Bayesian Linear Regression

5.1.1 Evidence Approximation

5.2 Bayesian Logistic Regression

5.2.1 Laplace Approximation

5.3 Spline and Wavelet Bases

5.4 Bayesian Neural Networks

6 Approximate Inference

6.1 Expectation Maximization

6.2 Variational Inference
